

# CONTENTS

## SPECIAL SECTION

BREDA M. ZIMKUS, CRAIG L. HASSAPAKIS, AND MARLYS L. HOUCK—Integrating current methods for the preservation of amphibian genetic resources and viable tissues to achieve best practices for species conservation. ....	1
RICHARD MOLLARD, MICHAEL MAHONY, GERRY MARANTELLI, AND MATT WEST—The critically endangered species <i>Litoria spenceri</i> demonstrates subpopulation karyotype diversity. ....	28
MIRNA G. GARCÍA-CASTILLO, ÁNGEL F. SOTO-POZOS, J. LUIS AGUILAR-LÓPEZ, EDUARDO PINEDA, AND GABRIELA PARRA-OLEA—Two new species of <i>Chiropterotriton</i> (Caudata: Plethodontidae) from central Veracruz, Mexico. ....	37

## GENERAL SECTION

AMIT SAYYED, ROBERT ALEXANDER PYRON, AND R. DILEEPKUMAR—Four new species of the genus <i>Cnemaspis</i> Strauch, 1887 (Sauria: Gekkonidae) from the northern Western Ghats, India. ....	1
TILAHUN MULATU AND ABEBE GETAHUN—Diversity of anurans in forest fragments of southwestern Ethiopia: The case of the Yayu Coffee Forest Biosphere Reserve (YCFBR). ....	30
WILLIAM R. BRANCH—Snakes of Angola: An annotated checklist. ....	41
DANIEL F. HUGHES, DANIEL G. BLACKBURN, LUKWAGO WILBER, AND MATHIAS BEHANGANA—New distribution records, observations on natural history, and notes on reproduction of the poorly known Sudanese Unicorn Chameleon (Chamaeleonidae: <i>Trioceros conirostratus</i> ) from Uganda, Africa. ....	83
NASIM AHMAD ANSARI—Enumeration of Herpetofaunal assemblage of Surajpur Wetland, National Capital Region (India). ....	90
SIMONA GEZOVA AND DANIEL JABLONSKI—Range extension and highest elevational populations of <i>Natrix tessellata</i> in Slovakia. ....	98
DILARA ARSLAN, ÇAĞDAŞ YAŞAR, AKIN İZGIN, CIHAN ŞEN, AND KERİM ÇIÇEK—New sites of the endangered Marmaris Salamander, <i>Lyciasalamandra flavimembris</i> (Mutz and Steinfartz 1995), (Caudata: Salamandridae) from Muğla, Turkey. ....	106

-------------------------	------------

**COVER:** Cave Salamanders (*Eurycea lucifuga*) are restricted to the extreme northeastern corner of Mississippi in areas that are geologically similar to Appalachia rather than the floodplain of much of the state. They prefer humid caves with cracks and crevices in which to hide. The Mississippi population likely represent a relic population from a much wider distribution of the species. Copyright © J.P. Lawrence.
